## NUTRIA HELLAS PC

### **NUTRIA MYCOTOXIN BINDER D (NUTRIA MBD®)**

NUTRIA MYCOTOX D is a multi-action mycotoxin binder with bentonite as the main ingredient and diatomaceous, organic acids, gluco-mannans to enhance the action. The above ingredients form a multi-dynamic mix, of enhanced mycotoxin binding capacity and effectiveness in dealing with the toxin problems.

The binding capacity of the formulation helps toxins' control by attaching all mycotoxins present in the gut and carry them harmlessly out of the animal. This prevents them entering the blood stream where they could cause the unwanted symptoms.

1. The binders attach themselves to the mycotoxin rendering it unable to cross the gut wall.
2. Bound together, they are harmlessly excreted from the gut.

*NUTRIA MYCOTOX D* should be added to the feeder wagon with the premix, the suspect feed should be added next, followed by the rest of the mix. This ensures the *NUTRIA MYCOTOX D* is as close to the mycotoxins as possible. *NUTRIA MYCOTOX D* can also be added to farm rations. In feed factories it must be added to the vitamin and mineral premix.

#### **Suggested Usage rates**

*DAIRY COWS:* For the first 10 day, when starting to use the product 50grams per head per day mixed on the TMR, following by 20 grams per head per day.

COWS IN DRY PERIOD: 20grams per head per day

GROWING CALVES: 10grams per head per day

BIGS and POULTRY: 1,5kg / Ton of feed

These rates are a typical guide, exceptional conditions may require a higher inclusion rate.

**Packaging:** In 25 kgs bags.
